

**[TOPIC]DOLCE BOTANICA, a new vinyl composition tile
made with nature-derived raw materials.**

The composition vinyl tile "DOLCE" has contributed to creating natural-like spaces by incorporating the nuanced richness of colors found in the natural world. The product has been renewed as "DOLCE BOTANICA," now incorporating botanical raw materials while maintaining its original design concept. We are pleased to introduce the new DOLCE BOTANICA, reborn as a flooring material more closely connected to nature.

A lineup of 39 colors featuring nature-inspired designs.

DOLCE is designed based on the concept of "Changes in natural colors that are not monotonous," inspired by plants and fruits. It reproduces "Spontaneous color interactions" through a kneading production process used for composition tiles. This feature aligns well with biophilic design, a recent trend in spatial design, and complements other natural elements in various spaces. The color palette includes versatile grays and beiges, popular across a wide range of spaces, as well as bright, accentuating colorful patterns.

Installation image 1 DB-3103 , DB-3110 , DB-3116 , DB-3128 , DB-3132

Green occupies the primary part of the design. The lime green, paired with the greenery of plants in the room, accentuates the bright impression of the space.

Installation image 2 DB-3103 , DB-3104 , DB-3106 , DB-3107

A 4-color systematic pattern design that creates a well-balanced atmosphere of calmness and sharpness.

Installation image 3 DB-3115 , DB-3116 , DB-3119 , DB-3120

Expressing stone pavement through four beige colors, with subtle color gradation that creates a relaxing and welcoming space.

Installation image 4 DB-3136 , WBJ-428 (WOODLINE)

A combination of blue-gray with a dark wood grain pattern. The different types of materials serve as the focal point, highlighting texture variation in the design.

Create a more attractive floor space with composition tiles that feature a unique material texture.

Since the launch of "P-TILE" in the 1950s, we have continued to develop composition tiles with new features, such as "MORTALIKE," which expresses a mortar-like appearance, and "TSUCHINAGI," which reuses eggshells as raw materials. The newly renewed "DOLCE BOTANICA" uses a nature-derived plasticizer and is an exceptionally attractive tile in both design and specifications. Please consider this tile as one of your options when planning a creative space.

Product Name	DOLCE BOTANICA
Material Classification	Vinyl Composition Tile KT
Color Lin-up	39 colors
Dimension	3.0mm (thick) × 457.2mm × 457.2mm
Packing	15 tile/case
Weight	20.0kg/case
